

## AFTER CARE

Microblading after care is very important to the appearance and longevity of your new eyebrows.

First 24 Hours:

- Every two-three hours, wipe the brows off with a damp cotton pad (use bottled or filtered water) then apply a THIN layer of ointment.

General notes:

- Always wash your hands with disinfectant soap before wiping your eyebrows and/or applying the post-care cream.
- You are wiping the lymph off your brows and using the ointment to ensure your brows won't scab.
- Don't saturate the cotton pad with too much water.
- Too much ointment will cause the pigment to fade. Less is more!!!!
- Next 5-7 Days:
  - Gently apply a THIN layer of ointment up to 1-2x/day. Be sure to use the ointment sparingly as your skin needs to heal itself.
- Avoid for 14 days:
  - Getting eyebrows wet in the shower (wash from neck down or utilize dry shampoo)
  - Please wash your face carefully around the eyebrows without getting water on the treated area
  - Keep hair out of the eyebrows as the hair has a lot of oils and bacteria
  - Increased sweating; sweat is salt and can prematurely fade the treated area
  - Practicing sports
  - Hot sauna, hot bath or Jacuzzi
  - Sun tanning or salon tanning
  - UV/UVA Rays or chemicals as they have been known to cause a shift in color and premature fading
  - Any laser or chemical treatments or peelings, and/or any creams containing Retin-A or Glycolic acid on the face or neck, no Botox/fillers
  - Picking, peeling or scratching of the micro pigmented area to avoid scarring of the area or removal of the pigment
  - Performing tasks related to heavy household cleaning such as garage or basement cleaning where there is a lot of airborne debris
  - Drinking alcohol in excess, as it may lead to slow healing of wounds
  - Driving in open air vehicles such as convertibles, boats, bicycles or motorcycles
  - Touching of the eyebrow area except for when rinsing and applying the  
with a cotton swab

## WHAT TO EXPECT DURING HEALING

Entire healing process will take from 4-6 weeks depending on your body regeneration and age. Your new eyebrows will go through several phases during the healing cycle. Itching and flaking may appear during the first 7 days post-microblading procedure. However, experience has shown that by strictly following these after-care instructions, these symptoms may quickly disappear.

The pigment will appear very sharp and dark immediately after the procedure. This is because the pigment is still sitting on top of your skin, and has not yet settled in completely. The color of the pigment will soften gradually. Do not be alarmed if you see some pigment on the cotton swab, as this is excess pigment and/or body fluid that is naturally exiting your skin.

Once the healing of the skin starts taking place, it will look like dandruff flakes or dry skin. However, this is just superficial color and dry skin being naturally removed from your eyebrows. The final look of your eyebrows will be apparent approximately 30 days after your procedure. Note that because of natural skin regeneration, after the recovery period (peeling), brows might appear lighter than original. This might give you the impression that color is fading too quickly. Often even with proper care, clients may lose original hair strokes which make brows look uneven. This is normal. That is the reason why most customers need a touchup after 4-6 weeks. Never rub the treated area as it will disturb the skin from natural healing. No makeup on the eyebrows for at least 10 days.

You can now enjoy your beautiful new temporary eyebrows. You will simply love your new gorgeous, fresh look! Thank you for trusting us with your eyebrows!
